	Index	11

Contents:

class `matk.matk` (***kwargs*)

Class for Model Analysis ToolKit (MATK) module

add_obs (*name*, ***kwargs*)

Add observation to problem

Parameters

- **name** (*str*) – Name of observation
- **kwargs** – keyword arguments passed to observation class

add_par (*name*, ***kwargs*)

Add parameter to problem

Parameters

- **name** (*str*) – Name of parameter
- **kwargs** – keyword arguments passed to parameter class

add_sampleset (*name*, *samples*, *responses=None*, *indices=None*)

Add sample set to problem

Parameters

- **name** (*str*) – Name of sample set
- **samples** (*list(fl64), ndarray(fl64)*) – Matrix of parameter samples with *npar* columns in order of [p.name for p in `matkobj.parlist`]
- **responses** (*list(fl64), ndarray(fl64)*) – Matrix of associated responses with *nobs* columns in order of [o.name for o in `matkobj.obslist`] if observation exists (existence of observations is not required)
- **indices** (*list(int), ndarray(int)*) – Sample indices to use when creating working directories and output files

calibrate ()

Calibrate MATK model

forward (*workdir=None*, *reuse_dirs=False*)

Run MATK model using current values

Parameters

- **workdir** (*str*) – Name of directory where model will be run. It will be created if it does not exist
- **reuse_dirs** – If True and *workdir* exists, the model will reuse the directory

Returns *int* – 0: Successful run, 1: *workdir* exists

get_obs_names ()

Get observation names

get_obs_values ()

Get observation values

get_par_dist_pars ()

Get parameters needed by parameter distributions

get_par_dists ()

Get parameter probabilistic distributions

get_par_maxs ()
Get parameter lower bounds

get_par_mins ()
Get parameter lower bounds

get_par_names ()
Get parameter names

get_par_nvals ()
Get parameter nvals (number of values for parameter studies)

get_par_values ()
Get parameter values

get_residuals ()
Get least squares values

get_sims ()
Get the current simulated values :returns: lst(fl64) – simulated values in order of matk.obslist

model
Python function or system command to run model

ncpus
Set number of cpus to use for concurrent model evaluations

parameters_file
Set the name of the parameters_file for parallel runs

results_file
Set the name of the results_file for parallel runs

run_samples (*name=None, ncpus=1, templatedir=None, workdir_base=None, save=True, reuse_dirs=False*)
Run model using values in samples for parameter values If samples are not specified, LHS samples are produced

Parameters

- **samples** (*matrix*) – Matrix of samples npar columns by siz rows
- **outfile** (*str*) – name of file where samples and responses will be written. If outfile=None, no file is written.
- **ncpus** (*int*) – number of cpus to use to run models concurrently
- **templatedir** (*str*) – Name of folder including files needed to run model (e.g. template files, instruction files, executables, etc.)
- **workdir_base** (*str*) – Base name for model run folders, run index is appended to workdir_base
- **save** (*bool*) – If True, model files and folders will not be deleted during parallel model execution
- **reuse_dirs** – Will use existing directories if True, will return an error if False and directory exists

Returns tuple(ndarray(fl64), ndarray(fl64)) - (Matrix of responses from sampled model runs siz rows by npar columns, Parameter samples, same as input samples if provided)

save_sampleset (*outfile, sampleset*)
Save sampleset to file

Parameters

- **outfile** (*str*) – Name of file where sampleset will be written
- **sampleset** (*str*) – Sampleset name

seed

Set the seed for random sampling

set_lhs_samples (*name, siz=None, noCorrRestr=False, corrmatrix=None, seed=None*)

Draw lhs samples of parameter values from scipy.stats module distribution

Parameters

- **name** (*str*) – Name of sample set to be created
- **siz** (*int*) – Number of samples to generate, ignored if samples are provided
- **noCorrRestr** (*bool*) – If True, correlation structure is not enforced on sample, use if siz is less than number of parameters
- **corrmatrix** (*matrix*) – Correlation matrix
- **seed** (*int*) – Random seed to allow replication of samples

Returns matrix – Parameter samples

set_obs_values (**args, **kwargs*)

Set simulated values using a dictionary or keyword arguments

set_par_values (**args, **kwargs*)

Set parameters using values in first argument

set_parstudy_samples (*name, *args, **kwargs*)

Generate parameter study samples

Parameters

- **name** (*str*) – Name of sample set to be created
- **outfile** (*str*) – Name of file where samples will be written. If outfile=None, no file is written.
- ***args** – Number of values for each parameter. The order is expected to match order of matk.parlist (e.g. [p.name for p in matk.parlist])
- ****kwargs** – keyword arguments where keyword is the parameter name and argument is the number of desired values

Returns ndarray(float64) – Array of samples

templatedir

Set the name of the templatedir for parallel runs

workdir

Set the base name for parallel working directories

workdir_base

Set the base name for parallel working directories

workdir_index

Set the working directory index for parallel runs

class matk.**Parameter** (*name, **kwargs*)

MATK parameter class

dist
 Probabilistic distribution of parameter belonging to scipy.stats module

dist_pars
 Distribution parameters required by self.dist (e.g. if dist == uniform, dist_pars = (min,max-min))

max
 Parameter upper bound

mean
 Parameter mean

min
 Parameter lower bound

name
 Parameter name

nvals
 Number of values the paramter will take for parameter studies

offset
 Offset to add to parameter

scale
 Scale factor to multiply parameter by

std
 Parameter st. dev.

value
 Parameter value

class `matk.Observation` (*name*, ***kwargs*)
 MATK observation class

name
 Observation name

residual
 Observation value minus simulated value

sim
 Simulated value generated by MATK model

value
 Observation value

weight
 Weight to apply to simulated values

class `matk.SampleSet` (*name*, ***kwargs*)
 MATK samples class - Stores information related to a sample includeing parameter samples, associated responses, and sample indices

indices
 Array of sample indices

name
 Sample set name

responses
 Nddarray of sample set responses, rows are samples, columns are responses associated with observations in order of MATKobject.obslist

samples

Ndarray of parameter samples, rows are samples, columns are parameters in order of MATKobject.parlist

INDICES AND TABLES

- *genindex*
- *modindex*
- *search*
